I'm the programmer behind Dragonade, so if you have any questions over it, you can contact me @ <http://www.renevo.com>. There are no tutorials in existence on it because I released the source code as is. It's up to those who choose to work with it to release such tutorials; but I am available for any questions you want to throw at me over what does what and how something works.

Just keep in mind that SSAOW is essentially a public version of Dragonade started by myself and adopted by BHS.
