LaeubiJust wondering:

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document [...] the "alt" attribute is required for the "img" element.

Anyone can redirect me to a browser that don't display images when the ALT is missing?

I know its for Textonly browsers, or if you turn off images as an 'alternative description of the images' but in most cases (like for side menues, icons, viewing pleasure objects only) its complete useless...

image folder gets screwed up and your page doesn't look as messed up.
blind kids - the software will read off the alt tags.
