Thought I would offer this tidbit to the new players.

On any map where the Barracks has side-ramps (i.e. Any Flying Map), players can jump from the roof and access the Barracks without walking through the front door.

This means, that the Barracks must be mined on the INSIDE, covering BOTH doors. Or my SBH will merely jump from the roof bypassing all your sandbag proximity mines.

I know this is basic for some of you, but I was playing in n00bstories1 server and nobody seemed to understand the idea.
