Subject: "[hidden window]"? (pc question)
Posted by Naamloos on Thu, 17 Mar 2005 20:44:34 GMT

Everytime i wan't to turn off my pc a program named "[hidden window]" pops up (well not the program itself but windows says it can't close so i have to do it manualy or wait till it's done loading).

It seems to be connected to the internet because the IE icon starts flashing a few times when this pops up.

I scanned my pc with norton and ad-aware 6 but i didn't find anything (exept a few files that shouldn't do any harm - says ad-aware).

I had this for a while now but it's starting to get annoying. What can i do?

Edit: NM i got a new computer. I didn't expect to get it for a while but i did

New question: how can i let my FPS go over 60? I can't remember how to do this! :oops:
