Ren Sizzlefabl am loathe to suggest it, but have you tried reinstalling Renegade? It's grasping at straws, but maybe there's a setting somewhere that still relates to your old card.

Renegade's installer freezes too.

Bassoonboyl got an Geforce4MX440-SE and 1.8 ghz processer on XP and it runs great. I recently upgraded and didnt have to renistall anything, so it must be something with ur computer. What OS are you using?

NeoSaberHere's my system info:

Windows 98

Duron 850MHz

128MB SDRAM

GeForce 4 MX 440 w/128 SDRAM

Direct X9

I'm beginning to think it may be a bug in the motherboard that the new card is just making more apparent. I've had some problems with this computer before but never this bad.
