WNxCABALEXdeath7Are you running windows XP with service pack 2?

Yea, I run Windows XP pro w/SP1 and 'sometimes' this happens]

This kinda is a SP2 issue on some systems.

Especially with the quit Button that it "freezes" @ the exit on Renegade.

But Renegade will always keeps crashing from time to time unless they fix it.

Other then that the best way, to get the most less crashes is run it on low detail. 640x XXX 16 bit everything low. Thats how i got my longest uptime in Renegade.
