This is Terri Schiavo's brain. Note hole in middle. The reason her muscles involuntarily twitch and she has reaction is because the small part of the brain at the base of the spinal cord is still intact. It is infact impossible that she has higher brain functions.

And Hydra, have you actually watched the major media on this? They bring on a bunch of fake "medical professionals" like their "Nobel Prize Nominee" [There is no such thing] and then run series about how people recovered from comas. [Different medical condition entirely]

And hey, I just heard that someone in North Carolina got rolled up by the police this morning for posting a bounty on both Michael Schiavo's head, and Judge Grier's.
