cmatt42 Your graphics card is teh sux.

I guarantee you that nobody here uses any of the graphics card listed here to play Renegade.

Since that list was made, 3 new generations of GeForce cards have come out. (GeForce 4, FX and the 6 series).

I don't think this will matter much anymore. It wasn't a big problem to begin with, and my computer has become royally fecked so I think I'm going to lay eyes on a new computer soon.
