Back on topic...

You've seen this plane?

I've done some research on it and it appears that it is based off the YF-21 Fighter from Macross Plus anime. It's not really a big surprise because Westwood had already borrowed things from anime series. The Raptor Attack Cycle, which was based off Kaneda's bike from Akira and the Ion Cannon from again from the same anime based off the Solar Beam.

The design itself shares some similarities with YF-23 Black Widow and Tomcat.

On the sides it reads "ASP-71". Don't know what it means.

On the outer side of tailwings it has an embossed GDI logo.

Features:

*Carries total 8 missiles under left and right wing.

*Variable tailwings

Appearances:

-Game box art (white)

-Second Tiberium info cutscene with the plane (black) taking out the Nod YF-22 Lightning II.
