Hey, don't flame me for this if someone has already asked about this but...

Sometimes when I am playing I get disconnected during a game. (not 56k just bad line quality) I usually get reconnected quite quickly, and the listings show up after ive been cut off the server, but when I get back into the server, it says that I don't have renguard running even if renguard is still running.

All i have to do is restart renguard and renegade to fix it, but because i disconnect quite often in game, i was wondering if there is a reason for why this happens and anyway to fix it ?

Thanks - PHxOnfire

(PS - If you didn't understand anything just say and i'll try to make any misunderstanding clear)
