IRON FARTBacteria only need to survive antibiotics like that once to build up a resistance. Once they have a resistance, any bacteria that form from them will have that resistance, and any bacteria so much as touching the resistant bacteria will become resistant. This story applies to malaria drugs in Africa. People are so afraid of getting malaria, that they take the drugs, even on false alarms, and build a resistance.

America is not a christian country, so kids shouldn't be taught like it is one. Schools should not hang on to old religious value as a basis not to teach evolution or make up the lame excuse that people are offended by it because of their religion.

Isn't malaria caused by a dinoflagellate protist? I thought antibiotics didn't work on those. Or are you saying that the people think it might work, and thus try to use it.

My thoughts on religion in schools:

I believe schools should teach the major topics of important world religions like Hinduism, Christianity, Islam, and Judaism. Because religion has, throughout history, been a major factor in shaping the world. Do itle, I really don't believe that you've never been taught anything of Christianity in school. I've had 2 or something less years of schooling than you have, and I have been taught the major points of Christianity, along with Hindusim, Buddhism, Daoism, Shintoism, Judaism, Islam, and a couple others.
