---

hi its me again

still i dont know whats wrong with rengaard and this special problem

i could play renegade with rengaard for some time now , but yesterday the error came back and i couldnt play on rengaard 1 servers . without rengaard i could play( tested it on those american server without rengaard as a must have and game2.exe not the RG exe) and it worked fine. today everything is fine again and rengaard works fine.

some days ago when i was able of playing on rengaard servers (like renegade community, this stutu server) evertime i started rengaard my AntiVir ( <http://www.free-av.com> ) told me there is an virus in c:\windows\system32\svkp.sys !?!

i told my AV to deny access to it and i could play fine

after an update of my AV it doesnt tell me anything about it , so i think it was a bug or something with their updated vir-dat.

i also read about it on a Gothic2 forum , they cant run the installation of an expansion pack or something , they have the same prob/error "could not initialize service ... .

dont if these are really the same things , just thought i let u guys know about it

so far i dont know what i can do , but also i am able to play like im used to.

ill tell u again as far as i know something new

cya  
Cojones

PS.: sorry for my english , i hope u understand what i wanna tell ya
