Wait wait...Don't send anything... You can get your CD key from your registry if you have it installed already.

Go to HKEY_Local_Machine>Software>Westwood>Renegade There should be a value there that says it is your serial. Copy that and save it.

Then download this:
** now why would you paste a link to a keygen? -Crimson **
And create a serial... then reinstall the Westwood internet stuff... Then go back to that registry value and restore it to what it was.

That *should* work. There should be a better way though.
