all the icons are called hud_cnc_something, you can extract them with the XCC mixer (no need for renX).

yes you'll need photoshop or paint shop pro to save them as those programs contain options like interlace and what DXT format to use. add me to MSN and i'll send you it P2P, it's 160mb

I once tried to give the Nod engineer a cool black jacket and leather trousers, but it turned out horrible.
