Subject: OT: Corrupted OS
Posted by Walrus on Sun, 08 May 2005 21:50:09 GMT

It may not be the os. Like obliv said, it's probebly just the jumpers. I have had the same problem.

If I was you, just unhook the power and IDE from the drive and try to boot up. If it boots you know the OS is fine and it's hardware. If it still does not boot - you may have a problem, maybe a pulled cable, maybe something got shocked.
