You're right. Opinions aren't wrong. what i really meant by it was that if you want to prove that his is right to believe he had better put more facts on the table.

all you whiners who complain to RG can you quit the game now? Because without RG i severely doubt there would be any population left to play. This is what it boils down to, OK? Renguard is a program to prevent cheaters from joining. It drastically reduced the number of cheaters to servers. At the price of this, you have to download a program that uses less memory than MSN and the likes that you most likely keep on all the time. If you aren't a cheater then the least you could do is download renguard so people who are inexperienced at this game, don't call you a cheater. Face it. Back when you first started you probably could barely do anything right. I'm pretty sure there had been times when YOU thought someone cheated when they didn't. So why not excuse people who are in the same position? Why not just let it be, download renguard, so that there is some intention to show that you do not cheat.

What I'm trying to get to is. Why on Earth would you go here to complain about Renguard if people are forcerging you? Indirectly you can blame Renguard for being made, and then making half-renguard servers available, and giving the ability to make it so people can forcerg people. OR, directly, you can blame the people who are forcerging you wrongfully.

Now i can see why people might be mad if something was incompatible with renguard on your computer. That it took you awhile to fix it.

I do not see a drop of 3 FPS really much of an argument because I'm going to gamble that probably over 90% of the people who play don't close their programs before playing so that they get the best out of their performance.

and Xtrm.. yeah I guess it could be for all you know, but for it to be legal, it would have to be stated in the install. Else that it would be illegal would it not? At least that's what i would think
