dead6reIm gonna look at the clan pages some time, but if its what i think it is, its just the images are pointing to a wrong place and needs replacing. For the renegade menu in the part on the site, the links dont appear because the text file and config isnt point to the right place.

Anyone got the link to the page?

The images have been messed up for some time.. but that didn't bother me. The major problem is the clan pages not loading, I get the 'Page failed to load' pop up everytime
