sterpsCan someone tell me how they manage to get an FPS of 100 in multiplayer?
I got:
P4 2.8
640Mb RDram
128DDR ATI Radeon 9600pro

The most I get is 85, and that is only when a server hasn't many players in it.

Your FPS can only go as high as your monitor refresh rate. To gain 100FPS, you need to have your refresh rate set to 100Hz which little monitors support.
