---

Everytime i try to launch renguard it comes up like it normally does but the window is blank and the mouse is "thinking", when i try to close it it says "End none responsive program Renguard?" (plus some other stuff) and i say end now and it closes. What is wrong?

Oh and i tried Reinstalling renguard and that didn't work.

What is going on? thnx to any1 who can help me...
