Do you have on board sound or a sound card? I have been having the same problem with my 9700 pro using the on board sound. I decided that I would try team speak. So, I installed my Sound Blaster Live economy card and yada yada yada . Long story short my fps at the idle was the same as my monitor refresh rate. Now with the sound card installed and my refresh rate at 85 hertz the fps at idle is anywhere from 500 - 600. In game fps, I have seen over 100. It does drop as low as 9 when I first join a game but then jumps up to 60 or so. Hope this helps, I know what it is like to play at 0 fps. IT SUCKS
