I have been thinking about my server I run it so often it would probably be more practical to just buy a neuther computer just to run the server.

So I have a few questions for you.

If I was just going to buy a computer just to run a Dedicated renegade server that would hold 12 people what would I need for hardwahir spesafecations also take into accont that I would try make it Linux.

I don't want to spend much money one it about \$200 Canadian or less.

So I want to know what the min hardwhair specs I would need are.

How much prosseser speed would I need could I do it with anything less than a 500?

Would I even need a video card?

How big of Hard Disk Driver would 2 gig be big enough?

what hardwahir would I not need at all and what could I borow from my other computer becues I would not need it much Like a moneter keyboard mouse CD rom drive ect..

Thankyou for your pashenc and help
