## Subject: Install issues

Posted by uurmek on Mon, 27 Jun 2005 04:57:54 GMT

I just recently got a laptop and wanted to install Renegade onto it, but the installation wont start. When I load up Setup.exe the game goes through the inital graphics, but before anything happens I'm brought back to the desktop. I can't figure out the problem and was wondering if it was something obvious, or if there's something wrong with my copy of the game or my computer.

I didn't provide any details of the computer itself, but I can if need be. Also, I should mention it works fine on my old PC, no problems with install either when I did it a while ago.
