download directX again from [microsoft.com/directX](http://microsoft.com/directX). if that fails, download the latest graphics driver from your manufacturer, maybe [nvidia.com](http://nvidia.com) or [ATITECH.com](http://ATITECH.com).

Keep the downloaded files on your desktop in case you do something to cause errors in your display drivers. with ATI cards you tend to uninstall your current driver before putting on the new one.
