check your port, ip and pw match up in the FDS and BrenBot config files. If you upgraded brenbot it will have gone back to the default settings (if you dont know what im talking about here you probably need to learn more about ren servers).

Also you need to make a text file called ssc_ignore.txt in the brenbot folder with just your renegade username in it IF you are playing on the same comp as the server, something to do with how RG works server-side i think....
