ok here it goes. When i launch a game on gamespy renguard window pops up i click renegade. it loads and when i get into game it tells me i need to download renguard. so i uninstall and reinstall renguard and when that happens i download the core patch. After the core patch loads a black window pops up saying removing every launguage cept english like it should and it keeps changing stuff then it says error 17. what is error 17 and how can i fix it to be able to play ren again?
