I started screwing around with Win-Amp buttons, and found out something really interesting. You know those vertical sliding bars in the middle of the player? Set them up as follows:

1st Bar: TOP -- 2nd Bar: BOT -- 3rd -- 9th Bars: TOP -- 10th Bar: BOT

It makes it sound kinda like your hearing it from across a phone or something. Its pretty neat.

EDIT: My Mom just wandered through here and i made her listen to it. She said "Mono, not stereo."
