Lots of possibilities.

Questions and Possible Solutions:

1. Is issomething like the following (does the error contain).

Microsoft Visual C++ Runtime Library

2. Is your computer name more than 31 characters.

3. Do you have the latest .net framework and c++ runtime software from microsoft?

4. Press CAD (ctrl+alt+del), close any programs in the processes list that you do not think that you require.

Any chance of an error log?
