=HT=T-Bird wrote on Thu, 18 August 2005 00:47: What I'd LIKE to see is somebody (Silent Kane, this sounds like a job for you...) reverse-engineer the WOL protocol and then build a WOL SSC that a) runs on Linux and b) is a separate executable from the FDS. (Think WOLSpy, just for Linux and in reverse).

There is no need to reverse-engineer the FDS code.
WOL works like an irc server (with some modifications),
The problem is that no one wants to make it
