i dont know if they in the right spot but whatever...

Ok so i downloaded that gmax and renegadetools and muliplayer levels.SO i click on the muliplayer level file and open hourglass and so all i do is add 4 gaurd towers ad gum emplacements for gdi and 4 turrents and gunemplancements for nod.So i save it and when i play renegade to test them out they arent there on map list or in mod packages.Then i forgot what i did but it was finally saved correctly adn i played it but only there was no terran just the buildings.

So what i need help on is first how would i save the map so that no would have to download to play it.and what am i doing wrong that only the buildings show
