Sometimes, doesn't hapen often but it hapens your SBH will flicker, if someones sees you then. It will be strange from the sbh's point of view because how in the hell can someone see you. Just a bug but I dont think it hapen's THAT often though.

There is skins that give a advantage, and lmo that removes the entire point of Nod having stealth, so people using that it's just sad. If you use a spider man skin or something well that's just for the fun I assume. But people using the bright skin shit, it's just wrong.
