=HT=Hirken wrote on Mon, 22 August 2005 14:34I have been using RenGuard for a while now, but I haven't been playing much lately, so I do not know when this started, but I noticed a couple of weeks ago, RenGuard would not be recognized by the server I was currently playing on, resulting in my being "!forcerg'ed" a few times. Naturally, this is quite irritating when I know RenGuard is running and it says that it is running. I have tried reinstalling everything from RenGuard to Renegade, but to no avail. Why is this happening?
-Hirken

Also, my apologies if this has been brought up before, but this is my first post here and I do not have the time for an extensive search.

Are you sure you have the latest version of renegade? also, it could be your firewall setting is too high.
