A beter way for WS how they had to make it is like this:

You can NOT overwrite the skins WS made.

You can only ADD skins. You will see an arrow below the picture just like the \$1000 characters.

So you will only see others using it when they have the skin. When you use the skin and others don't have it they see the default skin. This way you would never get that the "easier to see skins" were used so much.

Its just a cheap "tactic" from ppl to use it.
