A few minutes ago, I was on jelly after playing on unrules -newmaps. it was Walls_flying, the map changed to Islands. Everybody made kills, was being killed..blah. I was NOD. I upgraded to a 500 sniper and went on top of the outpost in front of the refinery. I looked right to the GDI Base entrance and a advanced Sydney appeared. I killed her with a simply yheadshot and after this I started firing at some med tanks. After a bit my game crashed down to the desktop, and I saw this in the RG log=

So am I kicked because of cheating (I didn't cheat at all -never) or is RG going crazy? I never changed something with the always2.dat. The only files I have in my DATA are Skins and Sounds....DDS, TGA and WAV.
