I am no biologist, but I've done my research. Although the psilocybin and psilocin in mushrooms interferes with brain activity, both chemicals leave the body after a few days, and neither, as far as I am aware, has any lasting negative effects. Mushrooms are quite safe, given a proper set (one's mental condition at the time of tripping) and setting (where one trips). Obviously, there are risks, but they are minimal.

And no, I don't HAVE to do drugs, mushrooms or otherwise, but I choose to. It's an experience (especially with psychedelic drugs) that a sober person will never come close to.
