I was thinking of starting a Renegade Dedicated Server. I have never hosted a "Dedicated Server" before and I would like to know what things I can do to make it as "lag free" as possible..... such as modifying the packet size, transfer rate, etc. I'm currently using Win 2000, AMD XP 2100 processor, 1GB DDR PC2100 RAM. Would anyone please e-mail me or post a reply so I can begin service.
