runewood wrote on Mon, 24 October 2005 14:40In order for god to have an effect in science you must assume he exists before there is any edv. to point out he does.

Not necessarily true. You can hypothesize that God is with no scientific evidence to support that He does, and work backwards to that goal, OR, you can take the scientific datum that you've accumulated and work back to an inevitable conclusion; that there is a first cause that caused all things into being. It just so happens that is the same thing that many people call God. And no, that does not mean the same God as that described in the Bible.
