Load up Renegade IP as you normally would. Then, before you would usually click "Connect", come here and tell us what the text under "Server Port" is. For example, if I wanted to connect to my clan's sniping server, I'd select that from the saved list, click "Load", and then the line would be:

c:\westwood\renegade\game.exe +connect 67.18.253.100:9124 +netplayername "myname"
