These Specs are great for the following cards i have previously posted. If you have a 300 watt or higher power supply, the ATi 9700 Pro will work well on your system, even though its about 10 dollars over the budget that you have, but this card has better performance for the money.

Link at previous post, the 3rd link. My apologies for picking newegg, i noticed your from California. Newegg is from California so the shipping will be uber-fast(or there is a warehouse there or whatever ya call it <\_<; ). If you end up buying this card get the cheapest shipping and you will be suprised.
