Quote:This is a known problem with Windows 2000. Either wait for RenGuard 1.04 (you may still be able to get into the private beta if you donate some $$$, ask Crimson) or use a different (preferrably newer) operating system, such as Windows XP.

it's better to wait. once I spent half a year on that crappy XP and I don't want to get this $hit back... and, just for fun. how nuch does the private beta cost? %)
