Dreadlord wrote on Wed, 16 November 2005 09:18Quote:This is a known problem with Windows 2000. Either wait for RenGuard 1.04 (you may still be able to get into the private beta if you donate some \$\$\$, ask Crimson) or use a different (preferrably newer) operating system, such as Windows XP.

it's better to wait. once I spent half a year on that crappy XP and I don't want to get this \$hit back... and, just for fun. how much does the private beta cost? %)

Doesn't cost you anything, the donations were for a new protection and as a reward you recieved Beta 1 as a thanks from us. Read the front page news on [www.renguard.com](http://www.renguard.com) for details on how to enter.
