Ok im sorry for the bother but ok .Here is the issue(s).
I started my computer up went to renegade and click it 5 or 6 times nothing happened not even any sorta renegade or renguard load screen. Than I try to fix it, I uninstall renguard which really messes me up it gives me the unauthorized game2.exe message which of course my game2.exe is perfectly normal but just incase I uninstall renegade I than go to update and it wouldnt work so I did it manually after that I downloaded renguard tried starting renegade and it said the same thing so I searched the forums for this problem found out that no-cd patch can fix this I try to download it and it says it wouldnt work because it couldnt figure out the game2.exe version and it failed. Any suggestions??
