A Geforce 3 TI can do that..Renegade is more off a CPU hogger anyways. You don't need a FX serie or a Radeon XT serie card to play Ren @ highest. I'm playing at highest settings with a pc from 2002.

As for the crystal, by the time I look at it I get killed by it Personnaly I liked the first one better but maybe it's just the ss

How come my GF4 can't do it then =/ I'm stuck without being able to display even certain lighting effects, and have to stick to about 8x6 rez.. Exdeath is going twice what I can there =P
