With WinRam, Renrem, you need to set it for the specific ports.

Look at your server.ini scroll down untill:

Quote:: AllowRemoteAdmin =

```
;  
;  
; Set this to true to enable remote server administration via the RenRem  
; tool. You must also set a password for remote administration to be  
; allowed.  
; Slave servers inherit this setting from the master.
```

AllowRemoteAdmin = true

```
;  
; RemoteAdminPassword =
```

```
;  
; This is the password required to connect to a server with the RenRem  
; admin tool.  
; Slave servers inherit this setting from the master.
```

RemoteAdminPassword = *****

```
;  
; RemoteAdminIp =
```

```
;  
; This is the ip that the remote administration service will listen for  
; incoming request on. The default is to listen on ALL ip addresses. If  
; you have an internal ip address and only want to administer internally  
; set this to your internal ip address.
```

RemoteAdminIP = 127.0.0.1

```
;  
; RemoteAdminPort =
```

```
;  
; The port to connect to for remote administration.  
; This can be set per slave. The default slave ports will be shown when  
; connecting to the master with the RenRem tool.
```

RemoteAdminPort = 5555 (what ever you like, i use 5555 easy to remember)

Open winrem, and for the FDStalkport but in anything you like, like 9999

Server ip; 127.0.0.1

Remote server port; add the port in your server.ini EG mine is 5555 so i add 5555

Remote server pass; put in the pass, (much sure its exactly 8 letters/number long) (It cannot start with a number)

Press done and thats it.
