Thx for your replay here is what i did...

*Remove RG

*Click Start -> Run and type in "regedit" to open Registry Edit.

*Remove the registry key HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\SVKP.

Was not able to remove this one!

*If you can, remove the registry key

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Enum\Root\LEGACY SVKP. If you cannot remove this one, then don't worry about it... move on.

*Close RegEdit

*Reinstall RenGuard (which will also reinstall SVKP)

And i try to run it and the exact same error!... And no i do NOT have ANY kind of anti-virus or firewall as i was doing this... Do i need to reboot? Or does not matter?... man this is wierd... im the only one having this problem??
