The buffer overrun might happen on windows XP but it always happens on Windows 2000

The best thing I can suggest is go to the hosts' website and if they have a forum (they likely will), explain your problem and mention that windows 2000 users cannot use renguard. Maybe the server owner will allow you on the server.

I don't think it's fair either that people cannot use renguard and hence can't play on quite a few of the servers on XWIS but a lot of the servers have renguard in that you'll only be made to use it if you get suspected of cheating...a healthy explanation on the server's forum is the best course of action to take..

Also, the kicks you keep receiving might be automated, not always somebody seeing you and kicking you.
