Is the p4 2,4 GHZ a pentium 4C? or A version?

And this "30 fps" does this count for a 1 player game, with no bots. Or does it start over 8 players. Let's say if he get's 30 fps on low detail with a p4A 2,4 in a 32 player game. That's really not bad at all.

You will probably ask what has this got to do with it. Well, Renegade = CPU dependant and let's say if you would run Renegade with a CeleronC@3Ghz with a GTX7800 you would still get to 30 fps in a single player bot map :s
