I have a 2.8 ghz server (no HT -.-) with 1 gig of ram and a 100mbit connection doing nothing right now.. You can use it to host a server for this map exclusively if you want to...
It doesnt have apache installed, but if you can be bothered then you can have remote and do it yourself if you wanna host the map there too.

will be fine to host up to 40 players i guess (but i doubt it will get that busy).
