Thanks for all the answers!

Quote:I'm not sure if this will work, but try this:

- 1.Open RenGuard and go to "Options".
- 2.Check the box "Load on startup".

RenGuard should automaticly open Renegade when RenGuard is opened, does Xfire/GSA open up your Game.exe or Game2.exe?

Didn't work, it starts game.exe.

Quote:Make sure it greets you by name when RenGuard starts -- it's case sensitive.

It shows my WOL name, not the xfire name, but when I get into the game I see my xfire name. Is this an error?

Quote:Why would you switch to a worse firewall to start with?
Tiny sucks for running behind a NAT

If I manually change to game2.exe, then Renguard doesnt appear at all, game.exe is standard and launches Renguard it's just that after Renguard has launched Renegade it shuts off or sumt.

Any ideas?
Thanks!
