Yeah The high ping's in XWIS just means that you have ICMP by your firewall blocked, so that's a good thing.

About the fps issue since when did it really start after the reinstall of Ren? or was it before, it could be alot of things.

Have you updated any programs, drivers latly? or new software?

If this isn't the case I would look more into Renegade itself.

I would recommmend

- A virusscan

- Uninstalling Ren not just by Start> config> software.

But doing that and after you have done that.

got to <disk>exampl C:/Westwood/Renegade/data

If all you have is Ren installed, just delete the entire map Westwood do backup skins or anything you like.

Then go to run typ :regedit

Look for map westwood. delete those keys.

Restart, defrag, reinstall Ren after you have rebooted.
