howang wrote on Tue, 17 January 2006 03:30I have setup a wFDS server with brenbot+rg, and I try to use my renegade client (w/RG) connect to my FDS but it tell me that I'm not using RG... But when I join other server, they know I'm running RG. And when other RGed friend join my server, it is normal too! Why RG cannot auth me?
This is a bug in RG (idk where)...it doesn't handle LANs correctly...
